INDIANA STATE POLICE	***STANDARD OPERATING PROCEDURE*** State Form 39870(R/S-06)	Reference Number SOC-011
	Subject Explosive Ordnance Disposal (EOD) Evidence Collection, Storage and Disposal	
	Special Instructions NEW	Effective Date **October 16, 2024**

I. PURPOSE

Establish guidelines for the safe collection, chain of custody, storage and disposal of explosive ordnances or related materials.

II. POLICY

To maintain safety and integrity of evidence storage areas, explosive ordnances or related materials will be stored separately and securely in an Explosive Storage Magazine. Each item will maintain a chain of custody and be recorded on a property record receipt.

III. PROCEDURE

A. Scene processing and collection of evidence

1. Explosives or Improvised Explosive Device (IED) materials that are not safe to collect and store as evidence, as determined by a Public Safety Bomb Technician (PSBT), shall be immediately destroyed by EOD personnel. These materials shall be photographed prior to destruction, if safe to do so.

2. All evidence collected that involves explosives or IED related components, will be collected by a PSBT, or under the supervision of a PSBT, if completed by a CSI investigator from the Indiana State Police (ISP) or another law enforcement agency.

3. All evidence will be recovered/packaged/sealed, when feasible, to ISP's evidence standards. If an item is too large, or not safe to package according to normal evidence procedures, the item will be tagged with the appropriate information. If packaging sensitive explosives or explosive related items, the PSBT will follow guidelines from the FBI Hazardous Devices School and/or ATF.

4. An ISP PR&R shall be used to document all evidence collected by PSBT's. If an evidence item can be stored through the normal ISP evidence submission process, that process should be utilized. If the evidence cannot be stored through normal ISP evidence procedures for safety reasons, those items will be documented on a separate PR&R and stored in one of ISP's explosive storage magazines. Any changes in the chain of custody before the item is placed in a bunker will be documented on the PR&R. It is permissible for individual evidence items from the same scene to be processed and submitted differently, depending on the nature of the item.

B. Magazine Access

a. Only ISP PSBT's shall have access to ISP's explosive storage magazines.

b. All ISP magazines will be secured with padlocks that adhere to ATF requirements. All padlocks will be "keyed" the same.

c. The bomb squad commander shall issue keys to ISP PSBT's for storage magazines and maintain a log of current personal who are issued a key.

d. If a PSBT's issued key becomes lost or stolen, the PSBT will immediately notify the bomb squad commander. The bomb squad commander will then begin the process of obtaining and implementing the replacement of all padlocks at ISP magazines.

C. Evidence Storage in Explosive Storage Magazine

1. Submission procedures:

a. All evidentiary items that will be stored in a magazine will be documented on a Property Record Receipt (PR&R).

b. A physical copy of the PR&R will be placed with the evidence item when it is stored in a bunker.

c. A digital copy of the same PR&R will be attached to the RMS incident report documenting the evidence's status, chain of custody, and storage location.

2. Evidence Removal and/or Changes in Chain of Custody

a. Any change in the chain of custody and/or removal of evidence from the magazine for testing, analysis, comparison, storage location change, destruction/disposal, and/or for court related activities, shall be documented on the physical copy of the PR&R stored with the evidence item.

b. All changes in evidence status described in section a. above, shall be documented in a supplemental RMS incident report.

c. A supplemental digital copy of the PR&R shall also be attached to the supplemental report, documenting the changes.

d. Upon placing new EOD evidence into a Explosive Storage Magazine, the officer shall notify the bomb squad commander that new evidence was placed into the Magazine.

3. EOD Disposal

a. Any EOD evidence that are identified which can be purged/disposed/destroyed, shall be documented, and preparations made for disposal.

b. After disposal, the PSBT responsible for the evidence (case officer) shall complete a supplemental RMS report documenting the action.

D. Inventory/Audit

a. An ISP PSBT will be assigned by the bomb squad commander to each magazine for inventory and audit documentation. An evidence audit/purge inspection shall occur at least once a year, concurrently with one of the monthly inventories.

b. The ISP PSBT responsible for the magazine shall be present, along with at least one other ISP PSBT.

c. The annual inventory/audit shall be documented by the PSBT assigned to the magazine by:

1. Pulling an RMS incident report to document all evidentiary items currently in the magazine and their status; and

2. Comparing all items to inventory/audit list maintained for each magazine.

E. This procedure is to be used in conjunction with all relevant Department regulations, rules, policies, and procedures.
